## State of the climate

#### Climate Action Note – data you need to know

The world is in a climate emergency - "a code red for humanity" according to the UN Secretary-General. The concentration of greenhouse gas (GHG) emissions in the atmosphere is wreaking havoc across the world and threatening lives, economies, health and food. The world is far from securing a global temperature rise to below 2°C as promised in the Paris Agreement. With a baseline in 1990, some countries are emitting more, some the same and others are emitting less.

The UNEP Climate Action Note shows you the global state of the climate emergency and its development.
